1. The Verbund-Clas Q.m.b.II. (Laminated Class, Ltd.) in Potsdam-Babelsberg (II 53/Z 63) is the only producer of safety glass in the Soviet Zone of Germany. The plant had to suspend production because the stocks of Zowllith were enhanced. Mowilith is a binding agant required for the production of safety glass.  2. The BMW plant (SAG Artowelo) in Eisensch and the automobile plants of the VVB (Z) Ifa could not complete their automobiles due to the lack of safety glass. For the same reason, all exports to the U.S.R. of belevision s.ts, made by the SAG Oberspree (Kabelwerk) in Berlin-Obernschoensweide (TS/Z) and the Sachsenverk in Presiden-Niedersedlitz (TS/Z) 29), hid to be stopped. Also the shipbuilding program was joopardized by the lack of safety glass.  3. The Soviet Zone government has directed all government agencies concerned to obtain the annual requirements of Mowillith for the Soviet Zone, which amount to about 75 tons. Attempts are being made to complete a barior agreement with the I.G. Verken in Loverhamen (TSZ/F IT) in order to procure the required amount of Mowillith in exchange for tricresylphosphate and aluminum chloride. * and **			FORMATION	REPURT	CD NO	25X1A
